Digital Media Programming

Final Project

The final project must be professional in nature. It may be an extension of the midterm project. It must include the features noted on the project evaluation rubric that is packaged with this instruction. It is suggested that you use it as a checklist in completing your final project.

In addition to being professional in nature, your topic must meet the guidelines set forth in your agreement when you apply for server space. See the *Web Site Guidelines* handout or the class Web site for those instructions.

You will construct a Web site that includes JavaScript features for your final project. This site must include a minimum of four HTML documents. If you use the same topic for both midterm and final projects, you must develop four new pages for the final assignment. You may not use Dreamweaver or any other WYSIWYG editor to write your scripts. You must use a simple text editor only.

If you completely re-work the two pages from your midterm assignment, you may count them as two of the four final pages. These documents must be linked to each other. The subject matter of the Web site is your choice as long as it meets policy guidelines.

A word about earning an A grade: If you complete only the above requirements, your grade will be a B. It is essential that all of the requirements are met. In order for the grade to go to an A, you must include an aesthetically pleasing project. This is where your artistic design and portfolio quality will receive credit. If you have any questions regarding this, it is your responsibility to ask the instructor.

When you present the project, be prepared to do the following:

- Explain what was involved in the development of the Web site.
- Explain any problems you encountered with the project.
- Explain how you solved those problems.
- Explain five things you learned about the Internet, HTML and/or Web site development from doing this project.

The final project must be loaded to your server when submitted. Also, zip all project files (and *only* project files with nothing extra) and attach the zipped folder to the message notifying the instructor that you have completed the work. The notification shall include a professionally written and courteous email message to the instructor with your name, project designation, due date and the last four digits of your student ID number. Following is the email address for submitting assignments:

roberts.hccs@yahoo.com

Give the exact URL, including the complete file name. If you do not submit notification that the assignment is ready along with the zipped folder, the instructor will assign a zero grade. You must submit a notice in order to receive credit for your work. This will be strictly enforced. No exceptions.

No late submissions will be accepted without exception.
